

Comprehensive SSL/TLS Certificate Management

Discover, Track, Report, and Manage all SSL/TLS Certificates across a Dynamic Server Inventory

Comprehensive SSL Management means discovering, taking inventory and managing all SSL Certificates across your network and cloud services. GlobalSign provides centralized certificate management and all the tools, services and SSL products to reduce risk, respond to threats and control SSL costs.

Robust Range of SSL/TLS Assurance Levels & Configuration Options

GlobalSign offers a range of SSL options to ensure public servers and sites are in line with industry best practices, but also offers cost effective-options for internal servers and special use cases. All domains are pre-vetted so certificates are immediately issued and available for installation.

- Extended Validation (EV), Organization Validated (OV), Wildcard, and Multi-domain certificates, with options to add up to 500 SANs
- All certificates comply with Google's Certificate Transparency (CT) policy so they will be trusted in Chrome
- Flexible Key Usage (KU) and Extended Key Usage (EKU) settings
- IntranetSSL supports internal server names and long validity periods for internal networks
- Secure mobile and other devices with limited storage, bandwidth, and computation power with ECC certificates

FEATURES

- **INSTANT CERTIFICATE ISSUANCE**
Domains are pre-vetted offering instant issuance of GlobalSign's full range of SSL Certificates to protect sites and servers
- **VARIETY OF SSL PRODUCTS & CONFIGURATIONS**
Meet both public-facing and internal server needs with a variety of certificate options, including a range of assurance levels and ability to issue from a non-publicly trusted root
- **COMPLETE CERTIFICATE & USER MANAGEMENT**
Control certificates from one centralized cloud-based platform, including lifecycle management, billing and user permissions
- **VOLUME DISCOUNTS & FLEXIBLE TERMS**
Gain significant discounts over purchasing individual certificates with no additional hosting or setup fees. Flexible business terms support organizations of all sizes
- **CERTIFICATE MONITORING**
Find and analyze all internal and public certificates with our Certificate Inventory Tool. Report on upcoming expirations, key length, hashing algorithm, issuing CA and more

Simplified Certificate and User Management

GlobalSign's cloud-based certificate management platform offers unique features and functionality that give you complete control of your certificate needs from one centralized account.

- Revoke, renew, reissue, or cancel certificates with the click of a button
- Robust API integration to automate certificate lifecycles into your existing workflows
- Active Directory integration for automated provisioning in Windows environments
- ACME protocol support automates provisioning to Linux servers
- Granular user permissions/delegated administration to define user roles and privileges within your enterprise
- Support for multiple business entities and departments under one umbrella account

Define and Enforce SSL/TLS Policies

Using outdated cryptography or weak key sizes can leave your company vulnerable. Ensure all your SSL Certificates comply with enterprise policy and that only appropriate individuals have access to certificate resources.

- Control who can issue certificates, what kinds of certificates they can issue, and to which domains they can issue
- Centralize and monitor certificate activity for multiple business entities, departments, and roles under one account
- Detect and remediate certificates that do not comply with enterprise policies on certificate configuration

Lower Total Cost of Ownership for SSL/TLS

GlobalSign's Managed PKI platform significantly lowers the Total Cost of Ownership for SSL by reducing the man hours needed to manage certificates and offering volume discounts and flexible business terms.

- Flexible business terms accommodate organizations of all sizes. Choose to pay as you go, or deposit account funds, eliminating the need to purchase and track tokens or "packs"
- SAN licensing option accommodates a changing server inventory by allowing up to a specified number of unique SANs across the active certificate inventory, enabling organizations to provide trial or short term certificate without impacting the bottom line
- Automate provisioning with Active Directory integration, ACME protocol support, and APIs
- Certificate licensing options enable fixed annual payments to secure all of your websites
- Significant volume discounts over purchasing individual certificates

Discover and Track All SSL/TLS

GlobalSign's Certificate Inventory Tool (CIT) locates all of your SSL Certificates and saves valuable time and resources over manual monitoring.

- Find, monitor, and analyze all internal and public SSL Certificates from one location, regardless of issuing CA, including self-signed
- Avoid unexpected expiration with email reminders to renew
- Keep up with best practices and industry compliance with the visibility into key length, hashing algorithm, and other certificate data

About GlobalSign

GlobalSign is the leading provider of trusted identity and security solutions enabling businesses, large enterprises, cloud service providers and IoT innovators around the world to secure online communications, manage millions of verified digital identities and automate authentication and encryption. Its high-scale Public Key Infrastructure (PKI) and identity solutions support the billions of services, devices, people and things comprising the Internet of Everything (IoE).
