

GlobalSign SSO

Up to 29% savings in
application life-cycle
management

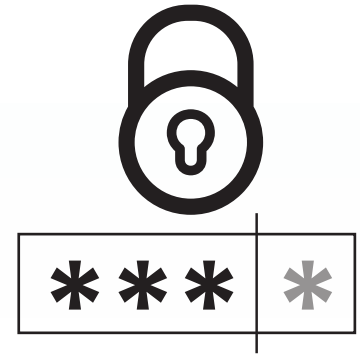

GlobalSign SSO

Up to

29%

savings in
application life-cycle
management

Key Features:

- Easy to deploy and connect to existing user data sources and applications
- Support for dozens of authentication technologies
- Powerful role and/or attribute based extensible authorization engine
- Secure access to local and remote web and cloud applications
- Provides access control across domains and application technologies
- Self-service credential management
- Highly scalable with high availability support

GlobalSign SSO provides secure user authentication, authorization and access control for web applications and e-services. This product platform significantly reduces application complexity and development time, and provides users with seamless single sign-on across application platforms and operating system domains. In monetary terms, this means cost savings of up to 29% for application life-cycle management.

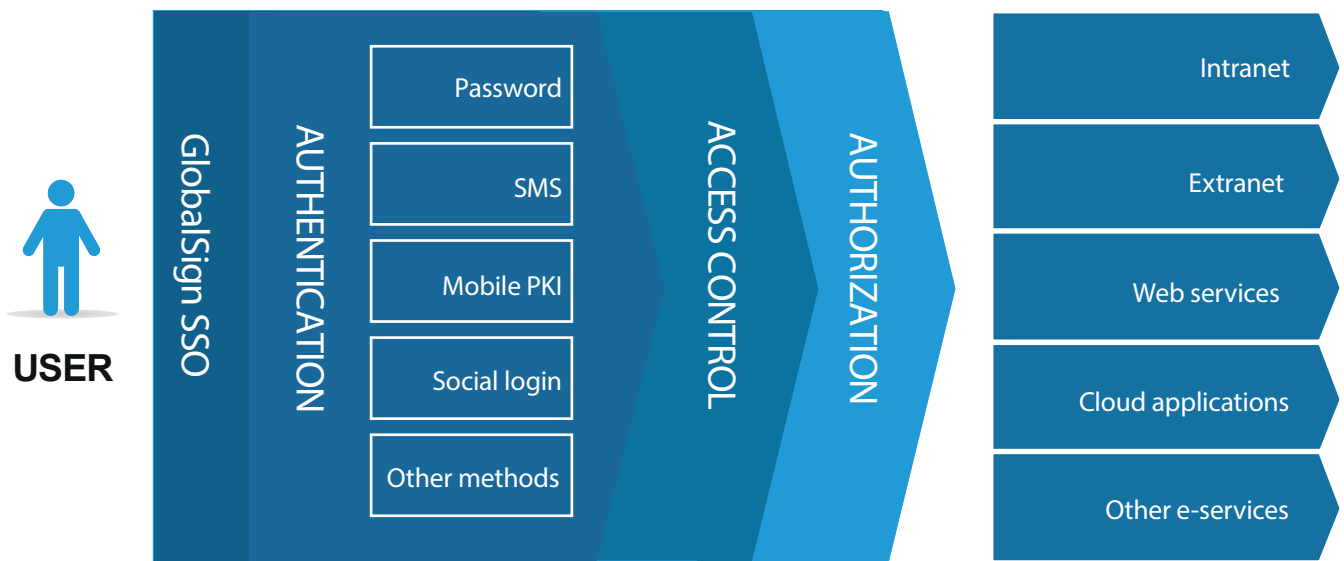

Benefits:

Customers benefit from a smooth login process, self-service account management tools and secure account data protection.

Enterprises benefit from faster service rollout and adoption, reduced help desk service calls, reduced risk exposure and improved audit compliance.

Government bodies benefit from rapidly scalable deployment of flexible eID solutions supporting millions of users

GlobalSign SSO

Through its configurable platform-specific standards-based integration modules, GlobalSign SSO provides easy and rapid deployment of advanced authentication and authorization to all popular web and application server platforms.

By integrating with the GlobalSign platform, application developers can focus on their core competency – building business specific applications – and benefit from a fully supported enterprise-class identity and access management solution.

About GlobalSign

GlobalSign, founded in 1996, is a provider of identity services for the Internet of Everything (IoE), mediating trust to enable safe commerce, communications, content delivery and community interactions for billions of online transactions occurring around the world at every moment. Its identity and access management portfolio includes access control, single sign-on (SSO), federation and delegation services to help organizations and service providers create new business models for customer and partner interactions. GlobalSign's core digital certificate solutions allow its thousands of authenticated customers to conduct SSL secured transactions, data transfer, distribution of tamper-proof code, and protection of online identities for secure email and access control.
