GlobalSign Integration with AirWatch MDM

Airwatch Mobile Device Management (MDM) automatically provisions GlobalSign Digital Certificates onto mobile devices without end user interaction, enabling secure BYOD and preventing unauthorized access

Seamless Mobile Security with Digital Certificates and MDM

Every day the number of enterprises and employees relying on devices to conduct business is increasing, giving enterprises and users flexibility to stay connected whether in the office or on the road. While this increased level of connectivity is beneficial for the enterprise, opening sensitive business services to mobile device users creates serious security risks and vulnerabilities that must be addressed.

Controlling which devices can and can't access corporate networks can be easily and successfully managed through an MDM platform and the use of PKI-based digital certificates. GlobalSign's integration with AirWatch's MDM platform allows organizations to streamline mobile authentication by automatically provisioning digital certificates onto mobile devices to enable secure Wi-Fi, VPN access, and authenticate to email.

Support BYOD and Secure Corporate Devices with Mobile PKI

PKI is a known and trusted security technology that organizations have been using for decades to authenticate users, machines, and servers within their organization. Expanding PKI to mobile devices creates an easy to implement and cost effective identity management solution for devices, allowing organizations to balance employee desire to access email and corporate data on the go and the need to protect against unauthorized access to key business applications.

Cross Platform Support

Digital certificates natively work across various device platforms including Android, Windows, Blackberry, and iOS, and are multi-functional, allowing the same certificate to be utilized for a range of authentication means.

Key Benefits

- ✓ Certificate administration can be automated, simplifying deployment and decreasing TCO

- ✓ Automatically provision digital identities on devices without end user interaction

- ✓ Easily manage certificates utilizing AirWatch's MDM or GlobalSign's Cloud-based PKI

- ✓ Prevent rogue device access to corporate networks and resources (e.g., email, WiFi, VPN)

- ✓ Enables employees to BYOD (Bring Your Own Device) or use corporate-owned devices to securely access company applications

- ✓ Increase security by reducing reliance on password-based authentication

- ✓ Improve user experience with seamless authentication to corporate networks and resources
