

DATASHEET

MobileIron Core & Cloud Integrations

Automatically Provision GlobalSign Digital Certificates with MobileIron Cloud or Core Enterprise Mobility Management (EMM) platforms

PKI is a powerful option for securing enterprise mobile devices. By provisioning certificates to employee devices, the devices themselves can be identified and authenticated to prevent rogue device access and desktop-based user identities can be transferred to mobile devices to enable strong user authentication and S/MIME* email encryption and security.

GlobalSign's integration with MobileIron Cloud and Core EMM platforms automates the certificate provisioning process, significantly reducing implementation time, administration burdens, and total cost of ownership.

GlobalSign Managed PKI and MobileIron Integration

GlobalSign's hosted Managed PKI services plug directly into the MobileIron Cloud and Core platforms. As soon as a new device is registered with MobileIron, a GlobalSign Digital Certificate is issued to the device. The integration relieves IT staff from having to manually install and manage certificates on each employee device and doesn't require additional steps from end users.

KEY BENEFITS

- **AUTOMATE DEPLOYMENTS**
Certificate administration can be automated, simplifying deployment and decreasing time and costs for IT
- **EASY FOR END USERS**
Seamless certificate enrollment and installation so end users aren't burdened
- **CENTRALIZED CONTROL**
One interface for all device and certificate management needs
- **ENHANCE MOBILE SECURITY WITH PKI**
Implement multi-factor authentication for users accessing corporate applications or networks via mobile device, authenticate the mobile devices themselves to prevent rogue device access, and enable S/MIME* so employees can send secure emails from mobile devices

About GlobalSign

GlobalSign is the leading provider of trusted identity and security solutions enabling businesses, large enterprises, cloud service providers and IoT innovators around the world to secure online communications, manage millions of verified digital identities and automate authentication and encryption. Its high-scale Public Key Infrastructure (PKI) and identity solutions support the billions of services, devices, people and things comprising the Internet of Everything (IoE).
